SeeByte is increasingly partnering with leading hardware manufacturers of unmanned underwater vehicles and sensors to provide enhanced capabilities for their systems. These partnerships are changing the subsea industry by providing turn-key robotic solutions, capable of carrying out complex and often risky operations in a safe and more efficient manner. These collaborations have resulted in SeeByte and their partners being able to showcase several never seen before capabilities.

Why partner with SeeByte?

- Collaboration allows you to differentiate your products from those of your competitors.
- Increase your exposure as SeeByte actively promotes the work and brands of our partners.
- With decades of R&D experience, let SeeByte focus on the software while you develop your core capabilities.
- SeeByte will work together with you to agree terms which will benefit your aims.

Become a partner

Get in touch with us to discuss how one of our teams can tailor a solution to suit your needs sales@seebyte.com or call +44 (0)131 447 4200 to speak to a member of our sales team.

“Our partnership with SeeByte is a key ingredient in helping SMD make our tools more accessible while maintaining the performance that is expected of us”

Andrew Hodgson – CEO of SMD
Our Partnerships

SeeByte is at the leading edge of software solutions and data management for the subsea industry. From autonomous riser and pipeline inspections using AUVs and ROVs, to state-of-the-art Automatic Target Recognition for side-scan sonar in Mine Countermeasures, SeeByte’s game-changing solutions are adding value to our customers’ operations. SeeByte's ability to partner with other companies has been the key ingredient in making these solutions possible.

With over 12 years’ experience developing software solutions for the military and oil and gas sectors SeeByte can offer a wide variety of capabilities including:

- signal and image processing
- subsea navigation
- command and control software
- autonomous solutions for subsea industries
- database management
- user interfaces
- GIS and real-time solutions

Smart Partnerships are based on mutually beneficial arrangements for both parties, allowing each company to use their expertise and work together to provide game-changing solutions for the subsea industry.
